introducing MegaMedia™

The world's first affordable wireless On-Demand passenger entertainment system.

Many travelers have become accustomed to having access to sophisticated in-flight entertainment systems when they fly only to be left without this passenger amenity when utilizing ground transportation. That changes today!

REI is proud to introduce MegaMedia™, our new state-of-the-art wireless on-demand passenger entertainment system designed for use on all modes of transportation including trains and buses. Enhance your passengers' on-board experience by providing amazing movie and TV content streamed wirelessly to your passengers' personal devices like smartphones, tablets and computers. Travelers can simply log on to your passenger entertainment portal and enjoy your content libraries while traveling in the comfort of their own seat.

MEGAMEDIA™

The MegaMedia System - Scalable and Flexible

Building upon our market-leading audio/video solutions, REI's MegaMedia system exceeds the expectations of the demanding passenger. Our MegaMedia high performance components are designed for the commercial transportation markets. The MegaMedia's advanced system architecture allows passengers to view an on-demand selection via the overhead vehicle monitors, or stream individually selected content to their own personal hand-held device. The ultimate solution for your passengers is to utilize both; providing content on personal devices while also offering content on overhead monitors for passengers without personal devices.

MegaMedia Software

MegaMedia features a familiar, and easy to use, passenger interface that is designed for an optimal viewing experience. Simply connect to the Wi-Fi enabled MegaMedia system and you are automatically directed to the MegaMedia landing page where you can start enjoying content immediately.

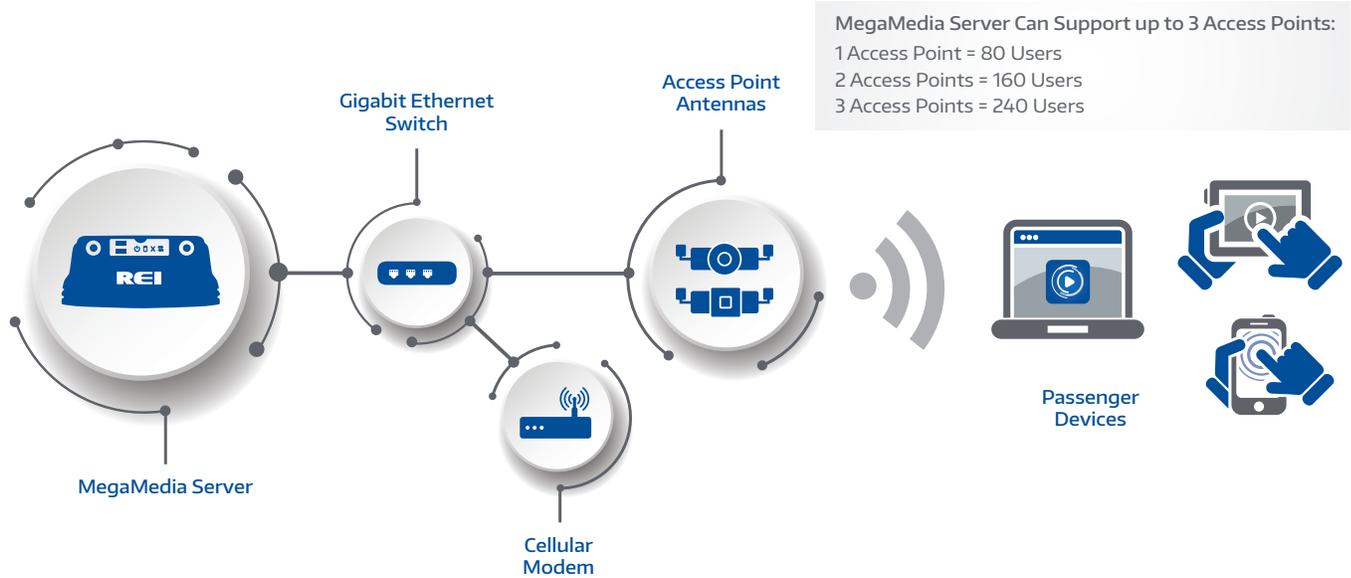

350+ HOURS OF Licensed Movie and TV Content*

MegaMedia has collaborated with content providers to bring you the hottest new releases, TV programs and box-office hits to your fingertips. The MegaMedia box comes with 350+ hours of preloaded content and will be automatically refreshed monthly with new content updates. Best of all, you won't need to waste time selecting titles and managing content. Our experienced staff selects the content for you and the MegaMedia unit receives the content updates automatically each month.

- Massive content library - over 6,000 titles available
- Studio edited movie titles
- Content includes English, French and Spanish audio tracks*
- Content includes English, French and Spanish sub-titles for the hearing impaired*
- Content updated monthly

* Requires content agreement.

COMPONENTS

The MegaMedia Server

Our MegaMedia server is the centerpiece of your passenger entertainment system. The server includes a 1TB solid state drive (SSD), offering unmatched reliability, durability, and flexibility in a compact secure aluminum casing. The SSD configuration and Linux embedded operating platform will power up to a ready state anytime the ignition is turned on in the vehicle. REI will perform content and software updates via a cellular connection. Downloading via a USB thumb drive or over a Wi-Fi network is possible in specific situations. REI's consulting and IT team will assist with meeting the specific requirements you need.

- 1 TB Solid State Hard Drive
- Linux embedded operation platform

Attendant Touchscreen Panel (optional)

If your mode of transportation already has existing monitors mounted then you can easily integrate MegaMedia to display content. Simply add an Attendant Touchscreen Panel preloaded with the MegaMedia software. The attendant will have full control to select and control the movie and TV show content on the existing monitors.

- 16:9 high resolution touch screen panel
- Modern, intuitive, graphical user interface

Multiport Gigabit Ethernet Switch

The multiport gigabit ethernet switch provides isolated power and data for up to three 802.11ac access point antennas. The content load passes from the MegaMedia server through the gigabit ethernet switch box and out to the access points.

- A single box provides power and data for up to three access points
- Provides isolation of power and data for higher reliability

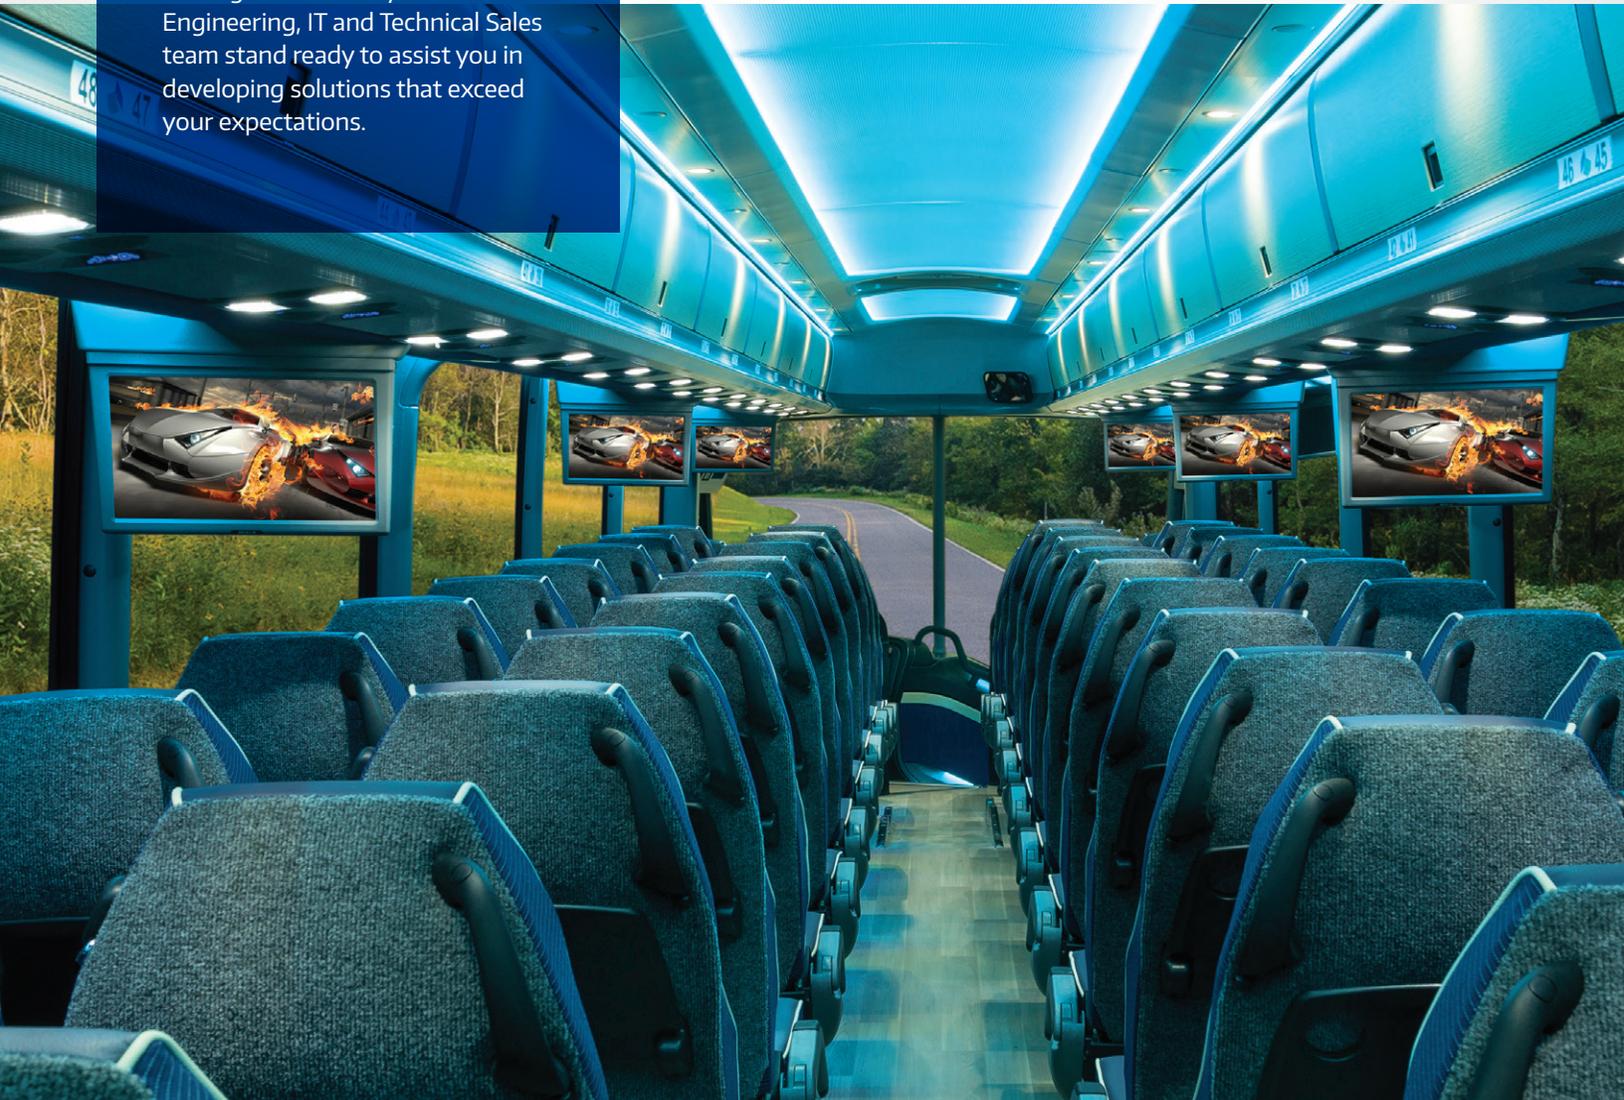

802.11ac Access Point Antennas

MegaMedia access point antennas are designed for rugged commercial applications and support IEEE 802.11a/g/n/ac wireless standards. They are configured for facilitating standard dual-band wireless communications with other devices on the network including passenger devices.

- High speed 802.11ac connectivity
- Optimized load balancing to ensure smooth streaming of media to all passengers across multiple access points.

WORKING FOR YOU!

At REI, we leverage more than 75 years of industry knowledge in transportation electronic solutions to perpetually develop cutting-edge technologies that enhance passenger entertainment and transportation surveillance systems and ensure the best performance and highest reliability. REI's Engineering, IT and Technical Sales team stand ready to assist you in developing solutions that exceed your expectations.
